The intern is capable to understand the technical subjects of the internship	X		
The intern is capable to use his/her technical knowledge for his/her internship	X		
The intern succeeded to progress	X		
The intern is capable to realize work with rigor	X		
The intern has a certain autonomy	X		

III - COMMENTS

It was a pleasure to work with Axel on the DP Agent Nightly Project which is used to verify the stability of our dpagent product. I came into the project towards the end as the previous team member had left the company. I can review the time he spent on the team for the last few weeks. He was interested in learning and also improving things which is essential for our work. He touched many areas of our infrastructure which utilized python, shell scripting and groovy scripting. He made numerous improvements to the Jenkins infrastructure such as simplifying various test scripts to a central script, parameterizing variables in Jenkins as well as shell test scripts. He questioned details on test behavior, messages and test result. He showed passion in his work constantly making changes to the infrastructure and a positive attitude even when encountering many issues with our file adapter tests which were not stable because of test preparation issue and stability of our dpagent and hana builds. He experienced the many iterations we have to go through to analyze issues. Axel mentioned Jenkins and scripting were some areas he wanted to spend time on apart from his previous work at SAP and this time got a good opportunity to see many different areas of software engineering used in our team. Quality is important and the best feature or product released is only as good as the quality.
